 8. Browser Compatibility
-

1. HTML Structure

The HTML Structure for each page is as follows:

- Meta
- Link to CSS Files
- Header
 - Logo
 - Social Links
- Navigation
- Main Content
 - Content Slider
 - Articles
- Sidebar
 - Search
 - Post Archives
 - Mailing List
- Link to Javascript Files
- Javascript

2. CSS Files

There are 3 CSS files in this theme:

- main.css
- colors.css
- skeleton.css

main.css

This CSS file is the main stylesheet for the theme. It holds all the values for the different elements of theme and the default color scheme.

colors.css

This CSS file holds the styling of all the other colors schemes that are included in the theme.

skeleton.css

This CSS file allows the theme to be responsive, adapting to different screen sizes.

3. Javascript Files

There are 2 Javascript files in this theme:

- jquery.js
- slider.js

jquery.js

This theme uses the jQuery Javascript library.

slider.js

The content slider in the theme runs on this Javascript file. There are some settings that can be tweaked, this will be covered in the 'Tweaking Javascript' section.

4. PSD Files

Included in this theme is 5 different PSD files:

1. homepage.psd
2. about.psd
3. portfolio.psd
4. blog.psd
5. contact.psd

These PSD files will be handy if you would like to make any changes to the theme's design. You can also create a new page layout using the existing PSD files as a base to work with.

5. Theme Styles

Included with this theme are 10 different theme styles:

1. Light
2. Dark
3. Grey
4. Green
5. Red
6. Orange
7. Blue
8. Purple
9. Brown
10. Dark Blue

To change these styles, go to the WordPress backend, select **Options > Styles** and select the style you would like.

6. Tweaking Javascript

The content slider in the theme runs off of slider.js, and there are a couple of values that can be changed to alter the look and feel of the slider.

Changing Values

In slider.js, you can alter these values:

auto: true

Boolean: Animate automatically, true or false

speed: 1000

Integer: Speed of the transition, in milliseconds

pager: true

Boolean: Show pager, true or false

nav: false

Boolean: Show navigation, true or false

7. Tweaking CSS

The theme is build on a responsive framework, which allows content to be seen optimally on all screen sizes.

Changing the CSS

Start off by going into the WordPress backend, **Themes > Theme > View Source**. Select the `style.css` file to view and have the ability to edit the code.

Here, you can change things like the fonts, sizes, colors, etc.

8. Browser Compatibility

This theme works well (-) or great (X) in the following browsers:

IE 6-8 -

IE 9+ X

Chrome X

Firefox X

Safari X

Opera X
